

CBP Energy Services

Building a pipeline may involve hundreds of workers, tons of steel pipe and equipment. Every step is guided by **CBP Energy Services'** project managers, engineers, office and field professionals, with years of experience in building natural gas pipelines that meet the highest industry and government standards for safety, quality, environmental protection resulting in exceptional operational reliability.

As we move forward, we'll continue the long-standing focus on execution with the goal of delivering projects safely, on time and

on budget, as well as securing contracts for new projects that will further fuel the next stage of our growth.

With our strategic location, acres of lay down, and 55,000 FT² fabrication facility in the heart of the Marcellus Shale Play we are pleased to offer:

- › **Main Line Construction**
- › **Midstream/Gathering Construction**
- › **Hydrostatic Testing**
- › **Facilities**
- › **Fabrication**

Including main line valves, meter stations, launcher and receiver barrels.
